

Task 2: Real-Time Market Data Dashboard

Dear Candidate,

Congratulations on being shortlisted for the next round.

As part of the next evaluation, please complete the following technical task.

Objective

Build a simple web application that fetches and displays **real-time market data** using either:

- Dhan API, or
- Fyers API

You may choose either API based on your preference.

Functional Requirements

Your application should display the following live market data:

- NIFTY Spot Price
- NIFTY Futures Price
- OHLC Data (Open, High, Low, Close)
- Volume
- VWAP (Volume Weighted Average Price)
- Market Breadth (Advance, Decline, Unchanged)

UI Requirements

Create a clean and simple dashboard that includes:

- Live data refresh
- Well-organized cards or table layout
- Last Updated Time
- Responsive design (optional but preferred)

Download Feature

Provide a **Download** button that exports all displayed market data.

File Requirements

- Format: CSV or Excel (.xlsx)
- The downloaded filename should automatically include the current date and time.

Example:

Market_Data_2026-07-03_04-30-15_PM.xlsx

or

Market_Data_2026-07-03_16-30-15.csv

The exported file should contain:

- Date & Time
- NIFTY Spot Price
- NIFTY Futures Price
- Open
- High
- Low
- Close
- Volume
- VWAP
- Market Breadth

Technical Requirements

- Use React.js (Preferred)
- Use JavaScript or TypeScript
- Integrate with Dhan API or Fyers API
- Write clean, modular, and reusable code
- Handle API errors gracefully
- Add a README explaining project setup and execution steps

Submission

Please submit the following:

- Complete source code
- GitHub Repository Link
- README.md with setup instructions
- Screenshots of the working application
- Sample downloaded CSV/Excel file

Evaluation Criteria

- API Integration
- Code Quality
- UI Design
- Data Accuracy
- Error Handling
- Export Functionality
- Project Structure
- Documentation

Submission Deadline: Please submit your solution within the given timeline.

We look forward to reviewing your solution.
